# Clyde River Integrated Community Sustainability Plans (ICSP)

2016 / 2017

Submission Year 15900 -2016/17

Tabled Document 259-4(3)

**Motion Number** 

Not Submitted

Feb 24/17

Objective

トくハイで:

Looking at sustainable initiatives that will help with furthering the development of infrastructure in Clyde River

167124,9 (1210 CETO, 22,00%)

Short-term

Plans within the next 5 years

**Airport Infrastructure** 

10010250

Description

Overlay stockpile replenished

1000 YD964-00 75500

**Action Required Sustainability Goals** 

Economic, Social

Communications

DADL'6 (DACROTO

Description

Establish Cellular Service

D'bUDAGE

Additional information

community requires cell phones for convenience as well as for emergency communications.

**Action Required Sustainability Goals** 

Cultural, Economic, Social

Communications

Dhb L'6 CDn-251

Description

Improve bandwidth/internet services

NPYIOPYO NDYPY"CDOWP"

Additional Information

Our internet service is extremely slow, this makes it very difficult to have basic teleconferences. Often we cannot send financial documents and even small files. Due to this restriction, the administrative staff in the Hamlet are forced to keep trying to send files. And it makes us less efficient.

Action Required Sustainability Goals

Cultural, Economic, Social

## Day Care

<112016

Description

Expand day care or build new facility

(ALD) durithand setting harden

#### **Additional Information**

Our current day care was mismanaged as the executive director was managing the finances and the day-to-day operations without having the proper pay or training to operate the facility. The Hamlet would consider managing the finances of the day care and allow the day care supervisor to manage the administrative aspects of the day care. This would allow the day care staff to focus on the children instead of focusing on a number of different administrative tasks. The current day care facility is boarded up and we are unsure of the status of the facility. They also liquidated all of the assets in the day care to recoup any losses. In order to get the day care operating again, it would require all new equipment and a in-depth analysis of the current status of the facility.

**Action Required Sustainability Goals** 

Cultural, Economic, Social

## Elders and Youth Facilities

Y5-264, Folo 772 LKRCCLU

Description

Community Hall

V-10.010

#### Additional Information

The Community Hall is the mainstay of our recreation programs and it harbors up to 100 kids nightly who engage in physical activity, sporting events and cultural activities. In addition, it is rented out to various agencies and private or community groups who need a venue for public meetings or events. Security is an issue as break ins have occurred and new doors / locking mechanisms need to be upgraded. There are ongoing issues with plumbing and heating which keeps our Maintainer busy. The Building is quite old, probably has asbestos and needs to be replaced or at the very least renovated.

**Action Required Sustainability Goals** 

Cultural, Economic, Environment, Social

### **Health and Wellness Infrastructure**

くっているでいってい

Description

As it ages and with new tehcnology coming, it needs to be upgraded.

(JOUND PROVOU)

Additional Information

Main issue is inadequate space and squalid conditions for the employees.

Nursing residence should be larger as currently not up to respectful standard for anyone to live in. The HC facility does contain asbestos and that is a concern. Security is a serious concern as break ins have occurred while the head nurse was actually asleep - security has to be upgraded, utility expense is very high given the age of the facility, and a new building would be much more effective in this regard.

**Action Required Sustainability Goals** 

Cultural, Economic, Environment, Social

Marine

ひてらか、 うこっていかい

Description

Community floating dock

120/11/2 >.CS.

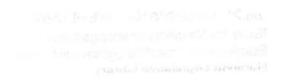

Additional Information

We believe that there is plans in place. There was lumber in our town that was purchased some years ago to build a floating dock. We do not know where or what the status is of the lumber or where the plans are for the floating dock. A floating dock would benefit our community deeply as all the residence who own a boat are all piled up together and as there is no space, boats are getting damaged.

**Action Required Sustainability Goals** 

Cultural, Economic, Social

11 August 2016 Page 2 of 13

### Marine

トイツル つこくろし

Description

Community harbour at breakwater & fish plant

DOC" DITI'DI D'6- TO"

#### **Additional Information**

Community requires a proper break water to allow for safer docking and to prevent damages to boats caused by high winds. Accessing the shoreline now is difficult due to shallow locations with hidden rocks - this makes exiting or entering the dock area treacherous. In addition, the community is seeking a fish plant to increase jobs and boost the local economy. There has been a feasibility study on the harvesting of the turbot and we are process of finding ways to move forward with the studies.

**Action Required Sustainability Goals** 

Cultural, Economic, Social

Municipal Garages and Buildings

Description

Expand 3 bay garage to 4 bay garage

#### Additional Information

We currently have a number of vehicles that are being parked outside due to lack of space (Backhoe and spare sewage truck and tracktor). During the winter months these vehicles are starting to see major wear and tear due to the weather. By expanding our garage it would allow us to properly store all of our vehicles. Since the 3 bay garage is heated it would also allow us to be able to safe on having to warm up the vehicles for an extended period of time during the winter months. Snow going into the vehicle during the winter and vandalism during the summer months are extremely common.

**Action Required Sustainability Goals** 

Economic, Environment

### **Public Housing**

Auserson1 Aus Aus Aust

Increase number of housing units for elders

ひるからかかい オアナアアイラア

#### Additional Information

There is currently no program in place for elders units. There is a huge demand for elder housing. Over crowding is a norm in our community and if there was dedicated elders units, it would help preserve our culture and also allow the elders to focus on contributing socially in our community.

**Action Required Sustainability Goals** 

Cultural, Economic, Environment, Social

# **Public Housing**

ム・ノーアングハン、ハーウン、人いムー

Description

3-4 Bedroom housing units

1º600 17460 A-Pre

### Additional Information

Our community did receive two 10 plexes 1-2 bedroom units. This did help our community but our demand still remains extremely high. We require 3-4 bedroom units within our community to accommodate families in our community. The Nunavut Housing Strategy has been a great starting point for understanding the need, now we need action to happen within our community to decrease our housing needs. If more public housing was created in our community, we believe we would see an increase in employment and greater community collaboration (as also identified in the Nunavut Housing Strategy).

Action Required Sustainability Goals

Cultural, Economic, Environment, Social

1

### **Recreation Facilities**

174.00 Den C10

Description
Renovation of seating and installation of a permanent concrete floor on the playing surface.

We currently only have a gravel pad for a floor and we need a concrete floor to enhance year round usage of the building. In addition, we require some type of equipment to allow for easy and safe changing of ceiling lights and in addition, we need a new Zamboni door which has been damaged beyond repair due to break ins. A proper door would eliminate break ins at our Arena Thermo siphons would also help keep the arena open longer. This would be a huge benefit in our community as we believe we would see a decrease in a lot of social issues.

**Action Required Sustainability Goals** 

Cultural, Economic, Social

# **Recreation Facilities**

V-74.0) - 12000

Description

Build swimming pool

>4ッケッノート

Additional Information

Children have no place to go during the summer months to safely engage in swimming. The hardier of the children do occasionally dip into the frigid Clyde River some summers but usually it is just too cold for that to occur, and there are safety issues associated with Children being that far away from the community as we have Polar Bears close to our community year round and there have been drowning incidents in the Clyde River. A proper supervised "summer" pool would allow the children to learn how to swim and to enjoy the great exhilarating activity of swimming.

**Action Required Sustainability Goals** 

Economic . Social

# Road Maintenance Vehicles and Equipment

くいしんづくりい

Description

Screener and Crusher

13-20

Additional Information

The only crusher that was available to our community was owned and operated by Kudlik construction whom have since removed it from Clyde River. We have to develop a new industrial section and other projects that will require crush rock. This is an important piece of equipment which we do desperately require.

**Action Required Sustainability Goals** 

Economic, Social

# Road Maintenance Vehicles and Equipment . マイヤカドレマウェ

Description

Excavator

#### Additional Information

As the community grows, additional lot sub divisions are needed, a dozer and a loader does not meet the requirements. There is the need for development of a new industrial area and this summer project would take 6 weeks and a excavator would be of tremendous benefit to get this project completed. In addition, we need to work on our harbor entrance and this piece of equipment greatly facilitates the dredging process.

**Action Required Sustainability Goals** 

Economic , Environment , Social

# Road Maintenance Vehicles and Equipment

くじけんでくいい

Description

New Roads

06' 4"311"

### Additional Information

Clyde River is indeed growing, we have just had a new hotel constructed, a major renovation to the Northern Store, two new Ten Plex's for Public Housing and a new Hamlet Administrative office have all been built within the past 2 years. About ten new vehicles arrived in town on the sealift and more drivers frequenting our limited access roads. A new road should be built from the Community Hall area connecting to the airport roadway to minimize traffic on the main road from Water Lake down to the busy intersection by the Health Centre. More roads are required for Clyde River.

### **Action Required Sustainability Goals**

Economic, Social

# Solid Waste

9.C.20,

Description

Solid waste site fencing

JOJ " L'114 240

**Additional Information** 

Current fencing is not adequate to keep the solid waste inside the fenced in area. Currently, waste is strewn all over, and some even go down to the sea ice area. It would require an engineer to come in and do an assessment,

**Action Required Sustainability Goals** 

Economic, Environment, Social

**Solid Waste** 

100,010 DC.

Description

New Solid Waste Site - towards Black bluff Hill location.

C1>79\_-UNLOTE

### Additional Information

The location should be in an area not visible to the town, the location should be further to the north (approximately 3 miles), there was a site identified when the old Clyde River clean up project was underway, since abandoned due to lack of funds but a there is a roadway to the site and the lower valley is perfect for a new land fill. Burning garbage Smoke would not end up in town as is the case now with our current landfill location. It would also not attract Polar Bears too close to town as they do occasionally visit the current dump for a snack. The fencing around the current solid waste site isn't high enough and debris is being blown out of the dump into our community. A feasability study will be our next step to see if it is feasable to put the solid waste site towards Black Bluff Hill.

**Action Required Sustainability Goals** 

Economic, Environment, Social

Water

Dr.C.12/6

Description

Water Source Fencing

100012406

#### Additional Information

On occasion, snowmobilers have travelled across the water lake and also residents have placed some onto the water lake source. Strong winds also play a role in garbage ending up in our only drinking source - a fence would eliminate most of these problems and is urgently needed.

**Action Required Sustainability Goals** 

Cultural, Economic, Environment, Social

Water

Description

Water holding tank

### Additional Information

With the standards of water delivery. Our water truck drivers must wait 20 minutes after they fill a water truck, to get it tested, before they can deliver water. By having a water holding tank they will be able to have immediate cost savings by taking away 20 minutes of having the water truck drivers have to wait and test the water.

Establish womens shelter

Additional Information

Domestic violence happens on a regular occurance. This is a sensitive topic and is not discussed as often as it happens. By having a womens shelter it would allow our community to have a safe place for a cooling down period of relationships. This would lessen the violence in our community. Substance abuse is believed to be the highest contributor of violence. Or the lack of substance as a lot of community members are dependant on drugs and alcohol.
